

Our Report of Findings

Your nervous system is composed of the brain, spinal cord, and spinal nerves. The *central* nervous system, located inside the spinal bones of the spine, controls all functions and healing in the body.

Misalignments of the spine (subluxations) can interfere with nervous system function, causing various organs or systems within the body to malfunction or heal abnormally and cause the development of progressive spinal degeneration (see below).

Anatomical, health science, and engineering researchers have been able to precisely define “normal” spinal alignments through three proven ways:

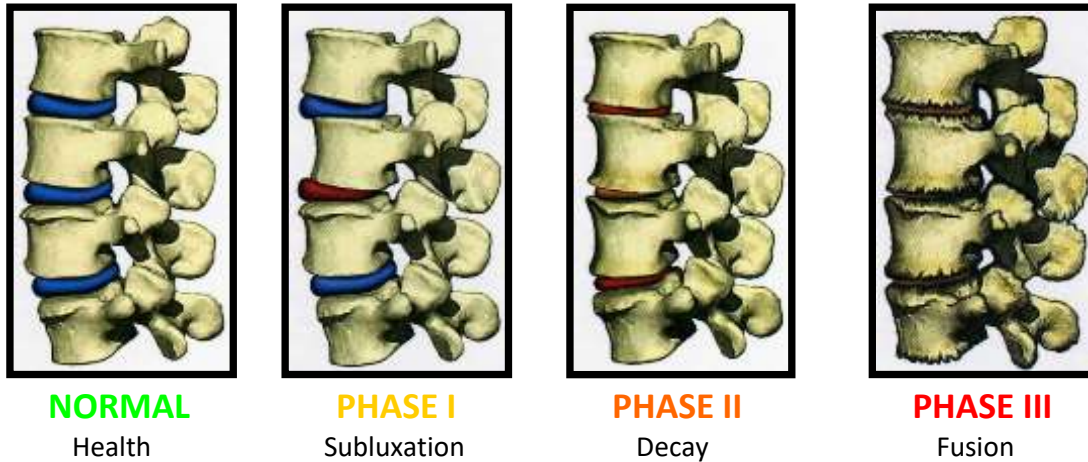

1. Physical Examination 2. X-Ray Analysis 3. Thermography Readings

Our office utilizes all three of these procedures to evaluate for correct spinal alignment and nervous system function.

YOUR HEALTH IS YOUR MOST VALUABLE POSSESSION.

Chiropractic adjustments restore normal spinal function and alignment, eliminate nervous system interference so your body can function and heal normally, and prevent progressive spinal degeneration.

PROGRESSIVE SPINAL DEGENERATION

How long you decide to benefit from chiropractic care is always up to you.
